

### NC7X Digital Counters

#### DIN 48×48mm, 4 digits counter

- Bright, easy to read color LCD display, showing a new standard in the future!
- POWER SUPPLY VOLTAGE: AC/DC100V~240V or AC/DC12V~24V.
- Each digit has its plus and minus buttons, simple.
- Terminals with protective cover to prevent electric shock.
- NC7X-P With the prescale value function, capable of measuring length.
- A variety of input or output mode, it also has power and memory function.
- Enhanced anti-jamming design, count accurate and reliable.
- NPN / PNP input signal can be switched.

Control output	Contact output: 3 A at 250 VAC/30 VDC, resistive load (cosφ=1) Minimum applied load: 10 mA at 5 VDC (failure level: P, reference value) Transistor output: NPN open collector, 100 mA at 30 VDC Residual voltage: 1.5 VDC max. (approx. 1 V)
External power supply	12 VDC (±10%), 50 mA Max
Sensor waiting time	250 ms max. (Control output is turned OFF and no input is accepted during sensor waiting time.)
Memory backup	EEPROM (overwrites: 100,000 times min.) that can store data for 10 years min.
Ambient	Operating temperature: -10 to 55°C (-10 to 50°C if counters are mounted side by side) (with no icing or condensation) Storage temperature: -25 to 85°C (with no icing or condensation) Ambient humidity: 25% to 85%
Gross weight	Approx. 179 g

Please refer to the manual, to ensure the safe and proper use of the product

#### ■ Ratings

Model	NC7X-C	NC7X-P
Category	Standard counter	Prescaling function (meter counter)
voltage	1: AC100~240V 50/60HZ 2: AC/DC12~24V (Allowable voltage range: 85 ~ 110%)	
Power consumption	Approx. 5VA (AC240V) , Approx. 3. 2VA (DC24V)	
Display	LCD digital display Display range: -999~9999	
Input modes	UP, DOWN, UP/DOWN-A, UP/DOWN-B, UP/DOWN-C	
Output modes	N, F, C, R, L	
Prescaling function	NO	Yes (0.001 to 9.999)
Decimal point	NO	Yes (rightmost 3 digits)
counting speed	5Hz , 30Hz , 1KHz , 5KHz (selectable, ON/OFF ratio 1:1)	
Input signals	CP1, CP2, RESET	
Input method	No-voltage input/voltage input (switchable) No-voltage input ON impedance: 1 kΩ max. (Leakage current: 5 to 20 mA at 0 Ω), ON residual voltage: 3 V max. OFF impedance: 100 kΩ min. Voltage input High (logic) level: 4.5 to 30 VDC, Low (logic) level: 0 to 2 VDC (Input resistance: approx. 4.7 kΩ)	
Reset input	Minimum reset input signal width: 20 ms	
Reset system	External, manual, and automatic reset (When the output mode for C, R)	
One-shot output time	0.01 to 99.99 s	

#### ■ Panel

#### ■ Size(mm)

##### ● Outline dimensions

##### ● Panel Cutout

#### ■ Key protection switch

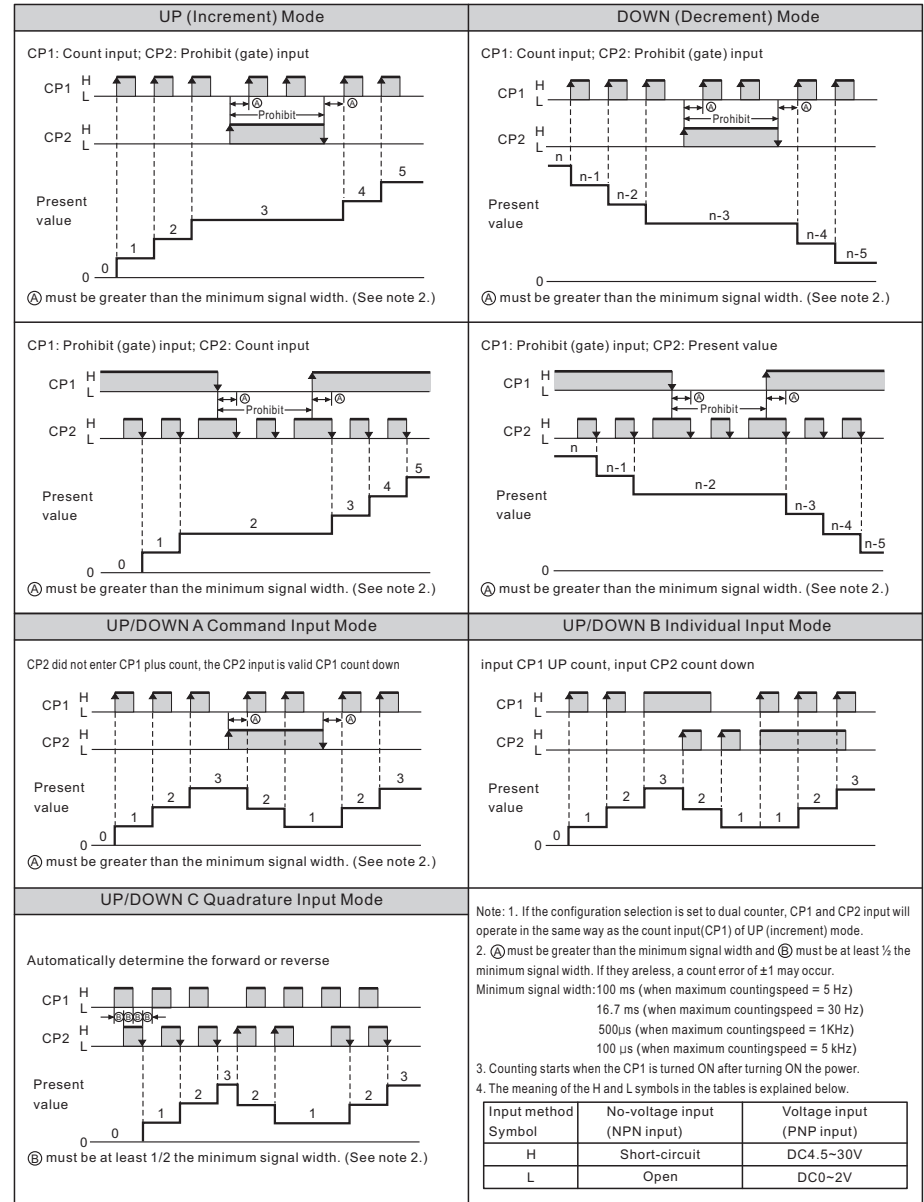

Set the key protect level.  
When the key-protect switch is set to ON, it is possible to prevent setting errors by prohibiting the use of certain operation keys by specifying the key protect level (KP-1 to KP-4). The key protect indicator is lit while the key-protect switch is set to ON. Confirm the ON/OFF status of the keyprotectswitch after the TMCTX is mounted to the panel.

## Note

- 1: before use, make sure that the voltage and connection, to avoid lead to instrument damage due to incorrect wiring.
- 2: Avoid the instrument used in high temperature, flammable, explosive, corrosive, dust, severe shock, humidity, static electricity, oil and other occasions.
- 3: Twist of the instrument signal lines and power lines may cause interference Please try to stay away from these strong electric wires, to conduct an independent wiring, and signal lines as far as possible to shorten the wiring distance.
- 4: Contact signal input, the CPS count rate should be set for low-speed 30Hz, can Prevent switch bounce error count. Reasonable speed settings, you can make the count more accurate.
- 5: Output relay, please do not exceed the switching capacity, according to the rated load, otherwise it would contact burned, such as an external high current relay or contactor exceeds its capacity.
